

## MAASAI MARA UNIVERSITY

MAIN EXAMINATION 2018/2019 ACADEMIC YEAR SECOND YEAR SECOND SEMESTER EXAMINATIONS

FOR
THE DEGREE OF BACHELOR OF SCIENCE
MAT 2213: CLASSICAL MECHANICS

DATE :
TIME:

DURATION: 2HRS

## INSTRUCTIONS TO CANDIDATES

1. This paper contains FOUR (4) questions
2. Answer question ONE (1) and any other TWO (2) questions
3. Do not forget to write your Registration Number.

## QUESTION ONE (30 MARKS)

a) Show that the acceleration a of a particle which travels along a space curve with velocity $\mathbf{v}$ is given by
$\mathbf{a}=\frac{d v}{d t} \mathbf{T}+\frac{v^{2}}{R} \mathbf{N}$ where $\mathbf{T}$ is the unit tangent vector to the space curve,
$\mathbf{N}$ is the unit principal normal and R is the radius of curvature.
(4mks)
b) Find the impulse developed by a force given by $\mathbf{F}=4 t \mathbf{i}+\left(6 t^{2}-2\right) \mathbf{j}+12 \mathbf{k}$ from

$$
\mathrm{t}=0 \text { to } \mathrm{t}=2 .
$$

c) A particle moves from rest in a circular path of a circle of radius 20 cm . If its tangential speed is $40 \mathrm{~cm} / \mathrm{sec}$, calculate its angular velocity, angular acceleration and normal acceleration.
d) The angular momentum of a particle is given as a function of time t by

$$
\begin{equation*}
\Omega=6 t^{2} \mathbf{i}-(2 t+1) \mathbf{j}+\left(12 t^{3}-8 t^{2}\right) \mathbf{k} . \text { Find the torque at time } \mathrm{t}=1 . \tag{3mks}
\end{equation*}
$$

e) An object of mass $m$ is dropped from a height $H$ above the ground. Prove that if air resistance is negligible, then it will reach the ground in

$$
\text { i. in a time } \sqrt{2 H / g}
$$

ii. with speed $\sqrt{2 g H}$
f) Given a space curve C with position vector
$\mathbf{r}=3 \cos 2 t \mathbf{i}+3 \sin 2 t \mathbf{j}+(8 t-4) \mathbf{k}$. Find the
i. Curvature
ii. Unit principal normal to any point of the space curve
g) A particle of mass $m$ moves along the $x$ axis under the influence of a conservative force field having potential $\mathrm{V}(\mathrm{x})$. If the particle is located at positions $x_{1}$ and $x_{2}$ at respective times $t_{1}$ and $t_{2}$, prove that if E is the total energy,
$t_{2}-t_{1}=\sqrt{\frac{m}{2}} \int_{x_{1}}^{x_{2}} \frac{d x}{\sqrt{E-V(x)}}$

## QUESTION TWO (20 MARKS)

a) At time $\mathrm{t}=0$ a parachutist having weight of magnitude mg is located at $\mathrm{z}=0$ and is travelling vertically downward with speed $v_{0}$. If the force or air resistance acting on the parachute is proportional to the instantaneous speed, find the
i. Speed
ii. Distance travelled
iii. Acceleration at any time $t>0$
iv. Show that the parachutist approaches a limiting speed given by $\frac{m g}{\beta}$., where $\beta$ is an arbitrary constant.
b) Find the work done in moving a particle once around a circle C in the xy plane, if the circle has center at the origin and radius 3 and if the force field is given by

$$
\begin{equation*}
\mathbf{F}=(2 x-y+z) \mathbf{i}+\left(x+y-z^{2}\right) \mathbf{j}+(3 x-2 y+4 z) \mathbf{k} \tag{8mks}
\end{equation*}
$$

## QUESTION THREE (20 MARKS)

a) Determine the motion of a simple pendulum of length $L$ and mass $m$ assuming small vibrations and no resisting forces. Hence determine the period and amplitude and frequency of vibrations.
b) A cannon has its maximum range given by $R_{\max }$. Prove that
i. The height reached in such a case is $\frac{1}{4} R_{\max }$
ii. the time of flight is $\sqrt{2 R_{\text {max }} / g}$

## QUESTION FOUR (20 MARKS)

a) i) Show that $\mathbf{F}=\left(2 x y+z^{3}\right) \mathbf{i}+x^{2} \mathbf{j}+3 x z^{2} \mathbf{k}$ is a conservative force field.

> (3mks)
ii) Find the scalar potential.
(4mks)
iii) Find the work done in moving an object in this field from $(1,-2,1)$ to $(3,1,4)$.
b) A spring of negligible mass, suspended vertically from one end, is stretched distance of 20 cm when a 5 g mass is attached to the other end. The spring and mass are placed on a horizontal frictionless table with the suspension point fixed. The mass is pulled away a distance 20 cm beyond the equilibrium position 0 and released. Find
i. The differential equation and initial conditions describing. the motion.
ii. The position at any time $t$,
iii. The amplitude, period and frequency of the vibrations.
